Création des branches pérennes

Cette page présente un "brouillon" pour la création des branches pérennes telles qu'elle est présentée (et réellement réalisée) dans un exercice ici → : [Exercice](#)

```
H:\essais\build_xml>hg glog --style compact
@ 1[tip]:0,-1  8b21deb1ddf9  2014-06-19 22:28 +0200  daniele
|   Ajout du fichier build.xml closes #2
|
o 0:-1,-1  5b4782aadd2  2014-06-19 22:27 +0200  daniele
    Paramétrage du depot Mercurial closes #6
```

Il s'agit, ici, de créer des branches nommées dont la durée de vie sera celle de l'application.

Création de la branche stable

Commande de création de la branche nommée

```
H:\essais\build_xml>hg branch stable
```

```
marked working directory as branch stable
(branches are permanent and global, did you want a bookmark?)
```

Enregistrement de la branche dans le dépôt

```
H:\essais\build_xml>hg commit -u daniele -m "Ajout de la branche stable"
```

```
calling hook commit.lfiles: hgext.largefiles.reposetup.checkrequireslfiles
committed changeset 2:0908014185d127703357bc518d548b7d13e25865
```

```
H:\essais\build_xml>hg glog -style compact
```

```
